

Washer Leak Checklist (Sarasota Residents)

Max Appliance Repair Sarasota - Homeowner Guide 2026

Stop the Water First

1 Shut off the supply valves

Pause the cycle and close the hot and cold valves behind the machine.

2 Cut power if water is near electrical

Switch off the laundry-room breaker before touching the machine.

3 Dry and watch one cycle

With towels down, run a short cycle and note where the water first appears.

Check in This Order

1 Hose fittings

Hand-tighten the supply couplings and check the rubber washers.

2 Hose bodies

Look for cracks, bulges, and rust. Replace brittle rubber with braided stainless.

3 Filter and drain path

Confirm the filter cap is seated and the drain hose is secure in the standpipe.

4 Door seal

On a front-loader, clean the gasket and feel for tears or trapped objects.

5 Detergent amount

Cut back the soap and make sure the dispenser is not overfilled.
